28 New SAT Math Lessons To Improve Your Score In One Month - Advanced Course: For Students Currently Scoring Above 600 In SAT Math And Want To Score 800

Synopsis

This Advanced Course from the "28 SAT Math Lessons" series, for the revised SAT beginning March 2016, gives you all of Dr. Steve Warner's unique tips, tricks and tactics that he has developed over the last 14 years to get his strongest students from a 600 to an 800 in SAT math. Dr. Warner has used his Ph.D. in mathematics to create the ultimate system for generating huge score increases in SAT math with only 20 minutes of preparation each day. The material in this book consists of Dr. Warner's exclusive strategies that students usually pay \$500 per hour to access during private tutoring lessons. The unique techniques Dr. Warner teaches, now available in his "Get 800" collection of books, are the most effective ever published and cannot be found in any other SAT prep book! Be careful! Some of Dr. Warner's students have shown such significant score increases that the College Board has accused them of cheating with no evidence besides their score increase from one SAT to the next. If you feel that this may happen to you after using one of Dr. Warner's books please contact him before taking your next SAT and he will tell you how to protect yourself. Beware of other books on the market that claim to be as good as Dr. Warner's. No book can be as effective as this one unless it targets students in a specific score range. Other tutors and authors, while very intelligent, often make a mistake by teaching every student how to solve problems in the same way. They do not understand the philosophy of the test and do not always know how to translate their own genius into points which would fit a specific student's needs depending on his/her math level. The "28 SAT Math Lessons" three book series is perfect for your SAT math prep for 5 reasons: Each of the 3 books in the series (Beginner, Intermediate and Advanced) targets students within a specific score range. The targeted nature of these books allows you to choose a course that is a perfect fit for you. This means that you will not waste any time practicing problems that you do not need help with. The Advanced Course is perfect if you are currently scoring 600 or higher on College Board practice tests and are aiming for a perfect 800. Dr. Warner has had to teach SAT math prep for 15+ years to accumulate the powerful combination of insights and strategies found in this book. Years of experience and a unique approach have led to the ultimate product that outdoes any other SAT prep book. While other books teach general mathematical knowledge, Dr. Warner's strategies are designed to exploit the test's weaknesses, which allow students to save huge amounts of time, avoid careless mistakes, and answer questions correctly without any messy algebraic computations. The lessons will naturally increase your mathematical maturity so that your potential score increases simultaneously with your actual score. This means that you can actually become capable of getting an 800 even if you were not before picking up the book. The information in the introduction alone is

enough to raise your SAT math score up to 50 points before you even attempt one math problem. There are more than 300 SAT math problems to practice with, most of which are Level 4 and 5. Explanations of the solutions are extremely thorough and comprehensible. The course is designed to ensure that students are preparing in the most efficient way possible just by reading the book from cover to cover. No choices ever have to be made. The author has ensured that good preparation happens automatically with no effort on the reader's part.

Book Information

Paperback: 306 pages

Publisher: CreateSpace Independent Publishing Platform; Csm edition (December 2, 2015)

Customer Reviews

My daughter used the 28 Lesson book and jumped her score from 680 to 780. One wrong only! She received a full scholarship to the University of Miami and is currently a freshman. -- Maricel Lam, Miami, Florida --This text refers to an alternate Paperback edition.

This book is for the revised SAT beginning March 2016. Quick tips for preparing for SAT math:

1. Begin studying at least 3 months before the SAT.
2. Practice SAT math problems for 20 minutes each day.
3. Choose a consistent study time and location for your SAT prep.
4. Every time you get an SAT question wrong, mark it off.
5. Redo SAT math problems you have marked off every few days.
6. If you get a problem wrong again, keep it marked off.
7. Try to solve each problem in more than one way.
8. Learn test taking strategies that work specifically for standardized tests.
9. Focus on SAT math problems at and slightly above your current level.
10. Take four official SAT practice tests before test day.

This review is LONG overdue. I bought the advanced course book in mid-Jan of 2017 for my sophomore daughter, who took algebra and geometry in the 7th and 8th grade, respectively. She asked for a review book that would help refresh her knowledge in these topics as she started to self-prepare for the upcoming SATs. I searched , looked through a bunch of math review guides, read all the reviews for 28 New SAT math lessons, and also reached out to Dr Steve, who was very quick to respond about the most appropriate book to purchase for my daughter who is in advanced math. His recommendation to buy the advanced book was spot on. My daughter found the book to be very helpful. She is highly motivated and very disciplined, so she set aside a little time each week to prepare for the SAT. She paced herself with the review book and by early April, she had finished reviewing all of the material in the book. She said she liked having the problem sets at the end of each section to reinforce concepts she had just finished reviewing. She took a mock SAT exam under timed test conditions, and saw her math score improve by 80 points to 780! She was thrilled to have been able to master these topics quickly and thoroughly! Thank you, Dr. Steve. I will be purchasing the beginners course for my younger daughter, who will be a freshmen in HS this fall and per Dr. Steve. She wants to start preparing for the PSAT and sees what a little bit of practice has done for her older sister!!

My daughter raised her SAT score in Math considerably (about 80 points) after going through this book. She thought it was very helpful. Her problem was that since she had taken Algebra in 8th grade and Geometry in 9th, she had forgotten some basic things that the SAT tests in Math. It also helped her in some advanced areas. My wife helped her a bit (she's an economist w/ big math skills) and she also liked the book.

It completely blew me away how Dr. Warner explains the material. After using his book for a month or so, I took my SAT on June 4. My score increased 70 POINTS!!! I would recommend this book to anyone. I even gave it to a friend after using it. Good Luck all!!!

Awesome book. One of the best book for SAT math I read so far. The book helped me to score more than 700 and it contains all the materials that you need to get a high score especially in college board math. What a book it has been for me. I was never able to get more than 700 in math in home. But after reading this book and day and night practice, I was able to get 760 in SAT math paper..

This book was exactly what it advertised and exactly what my daughter needed! My daughter raised her SAT math score from 670 to 760 after reading this book. Couldn't be happier!

Seems to be an excellent review manual

A really good book and helps my child improve his SAT math score by 50 points.

Good.
