Handbook Of Foaming And Blowing Agents

Synopsis

Handbook of Foaming and Blowing Agents provides useful guidance to assist practitioners in the more efficient and effective selection of foaming methods and blowing agents. The book focuses on the selection of additives for a diverse range of foaming processes, which can be enhanced using modern chemical means to improve product quality, speed up the process, and broaden the range of products that can be produced using foaming technology. Foamed polymers have many beneficial properties, including lower density, high heat and sound insulation, and shock absorbency. Foamed plastic parts are now a ubiquitous part of everyday life—from food packaging to seat cushions. As the application of foamed polymers expands and diversifies, a variety of foaming techniques and equipment are available to produce very diverse range of products. Foaming methods are generally established, but very little is known about the composition of materials to be processed and the additives to enhance foam products or make the foam production more economical. The book introduces useful analytical techniques for foaming, and thoroughly discusses the environmental impact of foaming processes. Introduces the fundamental mechanisms of action of blowing agents and foaming. Includes best practice guidance to help engineers and technicians improve the efficiency of their existing foaming processes. Enables practitioners to select blowing agents and foaming methods more effectively, reducing the risk of poor specification. Introduces useful analytical techniques for foaming. Discusses the environmental impact of foaming processes.

Book Information

Hardcover: 258 pages

Publisher: ChemTec Publishing; 1 edition (March 6, 2017)

Language: English

ISBN-10: 1895198992

ISBN-13: 978-1895198997

Product Dimensions: 6.1 x 0.6 x 9.2 inches

Shipping Weight: 1.2 pounds (View shipping rates and policies)

Customer Reviews

George Wypych has a Ph.D. in chemical engineering. His professional expertise includes both university teaching (full professor) and research and development. He has published 18 books, 47 scientific papers, and he has obtained 16 patents. He specializes in polymer additives, polymer processing and formulation, material durability and the development of sealants and coatings.
