Jane R. Burstein has been a private SAT tutor since 1985. Carolyn Wheeler teaches math at The Nightingale-Bamford School in New York, New York. LTC Richard Dahoney, U.S. Army, Ret., is the principal author of disbursing policy guidance for the U.S. Department of Defense.

Overall the book is good for studying math, vocabulary, reading, and science portions (note: the book says AFOQT doesn't have comprehensive reading but it does, so study it.) However, this book doesn't have any pilot testing sections so online resources must be used. Do NOT get the online version unless you don't care about the math (though you should) because the formulas are small due to the way the books are loaded and they cannot be enlarged. I can't give it a bad review though because I took it and passed, this being my main source of study. Make use of the practice tests and actually time yourself, also look for the sections online that are not included in the book.

This book prepared me very well for the test. I would have liked to have been given a couple more practice tests. It went into too much info on physics which only succeeded in scaring me. Overall, I recommend it.

There are so many errors in the mechanical comprehension section of this book as well as the test questions. The font size of the formulas are too small. I have to look up the formulas online to verify that I read them correctly. It definitely not worth the price I paid for this book.

Took with the AFOQT. Did not help with the math portion of the test

excellent book

Good book for studying!

Not really a good book if you are looking to take the AFOQT. This book is geared more to ASVAB, meaning it only covers the AFOQT sections that are also on the ASVAB. Quick summary 90% of this book is geared toward how to be successful taking the ASVAB, do not buy this product if you are seeking AFOQT study material.
