Mary (DeSouza) Stephens graduated from MIT with a bachelor's degree and a master's degree in Computer Science and Electrical Engineering. She has over 15 years of teaching experience, including designing courses and teaching as an adjunct faculty member at UMASS Boston; Teaching discrete math at MIT; and developing curriculum for and teaching classes in high school computer science, LSAT, algebra, geometry, science, humanities, and K-8 math and computers. Outside of teaching, Mary worked in engineering, product management, and strategy for companies including Edusoft and Oracle. In the past few years, she has spoken at international education conferences and has served as Professional Math Consultant at Merrimack College, founder of Omega Teaching, and Research and Development Manager at Houghton Mifflin

Harcourt. She currently is the CEO of PrepForward ([www.prepforward.com](http://www.prepforward.com)) and can be contacted at [mary@prepforward.com](mailto:mary@prepforward.com).

This book has several features that separate it from all the other prep books I've seen or tried before. First, there are simply no errors in it. It is so frustrating when you're taking a practice test in a prep book and there are errors! But I found none in this book. The preparation and the editing are far above the standard for this type of book. Second, the book provides an astounding number of practice problems. Each chapter focuses on one major test area (like number & operations, algebra, geometry, probability) and is divided into several subsections. Every subsection includes key explanations and examples and 10 test questions. Thorough explanations are provided at the end of the subsection for each of the test questions. There's also a 20-question module review test at the end of the chapter with in-depth explanations. That's like 500 extra practice questions in addition to the 50-question and 100-question practice tests at the very end. Nothing beats practicing with real problems and this book gives you that practice. Finally, the book is clear and concise and covers all the topics thoroughly so you have all the skills you need to succeed on the test!

This book has everything you need for the test and has practice test. Unfortunately, you need a score of 240 to pass this test and I got a 222. From what I hear this is a killer test to pass, many have taken it 3 or 4 times. So, I will reap the benefits of this book for a second time, as I will be taking the test again next month and hopefully passing. Even though I didn't pass, all the information you need is in here. I recommend any of these books. I bought the Communication and Literacy one and passed that first time around.

I purchased three books to help prepare me for the exam, this one was by far the best of the 3. The book is broken down by sub-sections on the exam with short quizzes after each topic. Each quiz and the cumulative exam at the end come with detailed explanations of each answer!! No more trying to figure out how to arrive at the correct answer with only the correct answer to guide you!

I found this book very helpful in reviewing for the Middle School Math MTEL exam and passing it. Took the practice tests to see what areas I needed to brush up on.

I selected this manual to prepare for the Middle School Math MTEL. The book was easy to follow, explanations clear, and I passed. I highly recommend this preparation manual!

I just took the test yesterday. This is the best book to prepare you for the actual test. Highly recommended.

exactly as expected

I used this to study and passed the first time. I highly recommend it. This book is all you need to pass the Middle School Math MTEL. I have also used her elementary math MTEL book and passed that one on the first try, too. Mary DeSouza's books are just great. If you read this book, do the problems in it, and try each and every problem on the MTEL practice test (the real one that is posted for free online), you will pass. Actually, I think the problems in this book and on the MTEL practice test online are much more difficult than the actual test!
